

ASRO comes to the aid of all types organizations and help them use energy efficiently and reduce costs, offering energy management systems certification services in accordance with EN 16001:2009.

Implementation of energy management system (EMS) aims to use more efficient energy (electricity and fuels), without reducing production levels without affecting quality, safety and environmental activities. It may also help identify opportunities to improve productivity and reduce costs in areas other than energy, as EMS incorporates many disciplines (eg engineering, management, human relations). In this way you can better use other resources such as raw materials and labor.

Guarantee a correct implementation and operation of EMS in an organization constitutes a certification by a certification body that is capable of a fair and competent assessment and ASRO by Environmental Management Systems Certification Body (EMS ASRO-OC) fully comply these conditions.

Integration with EMS of Environmental / occupational health and safety / quality Management Systems shows involvement and concern at the highest level, with employees, for continuous improvement and help create a favorable image for the organization he leads
