## Subsector B01: FIRE PROTECTION

---

**Subsector :** B01 **Registration Date :** 2019-09-25  
**Organization :** EVS  
**Country :** Estonia  
**Project ID :** 00106455/0001 **Project Established**  
**ICS :** 91.140.01  
**National Ref :** prEVS 919  
**Title :** Smoke and heat control systems - Design, installation, maintenance  
**Scope :** Standard gives guidelines for fighting against smoke distribution in case of fire. Current standard concentrates on natural and mechanical smoke extraction systems and overpressure smoke control/prevention systems, designing and level of automation as well as gives demands on installation, control and keeping systems in order.

**Relatedness :**

**National :** New

**Title :** Fixed firefighting systems - Automatic residential sprinkler systems - Design, installation and maintenance  
**Scope :** This document specifies requirements and gives recommendations for the design, installation, water supplies and backflow prevention, commissioning, maintenance and testing of fixed residential fire sprinkler systems in buildings for residential occupancies. This document is intended for use by those concerned with purchasing, designing, installing, testing, inspecting, approving, operating and maintaining automatic residential sprinkler systems, in order that such equipment will function as intended throughout its life. This document identifies construction details of buildings which are the minimum necessary for satisfactory performance of residential sprinkler systems complying with this standard. This document applies to any addition, extension, repair or other modification to the residential sprinkler system. This document does not cover situations such as arson where fires of a malicious intent may be started in multiple locations simultaneously.

**Title :** Internal plastics linings for concrete manhole bases - Part 3: Polyurethane (PU) linings - Requirements, tests, quality control  
**Scope :** This document lays down terms, nominal diameters, dimensions, requirements, tests and the quality control for base liners of polypropylene serving for concrete manhole bases. This document is applicable for products to be used in manholes or inspection chambers according to ÖNORM EN 1917 and ÖNORM B 5072 for gravity sewerage and drainage conduits.

| Title :        | Gas infrastructures. Gas pressure control stations for inlet pressure between 5 bar up to 12 bar and outlet pressure up to 0,04 bar – Casing, general parts and control systems - Design, construction and testing                                                                                                          |                     |             |
| Scope :        | This standard prescribes criteria for design, construction, and testing of casing and general parts of gas pressure control systems.<br>This Standard deals with gas pressure control systems with inlet pressure between 5 bar up to 12 bar and outlet pressure up to 0,04 bar for I and II gas family according to EN 437 |                     |             |

| Title :              | Pressure regulators for gas receiving installations with a maximum inlet operating pressure (MOPe) greater than 0,4 bar and up to 5 bar and a maximum outlet operating pressure (MOPs) up to 0,4 bar.                                                                                                                                                                                                                                                                                                          |                            |                          |
| Scope :              | The purpose of this standard is to define the construction and operation characteristics, the testing technique and the marking of pressure regulators with a maximum inlet operating pressure (MOPe) greater than 0.4 bar and less than or equal to 5 bar and a maximum outlet operating pressure (MOPs) of less than or equal to 0.4 bar with built-in safety valve for maximum pressure tripping, with built-in safety valve for minimum pressure tripping and with a nominal flow rate up to 250 m3 (n)/h. |                            |                          |

| <b>Title :</b>              | Bar-top stoppers and cork shank for bar-top stoppers - Physical tests - Determination of dimensions                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Scope :</b>              | This document is intended to specify the method for determining the size of capsular, cylindrical or conical cork stoppers and cylindrical or conical cork bodies to capsular, in particular the diameter, total length and partial length of capsulated cork stoppers and in some cases ovality. It also intends to establish the method for determining capsule dimensions, namely height and outer diameter. It applies to all types of cork stoppers and natural, sealed, agglomerated and micro-agglomerated cork bodies as defined in ISO 633. |

| <b>Scope :</b>        | This standard specifies safety requirements and test methods for roller sport equipment waveboard, which is designed for use by one rider at a time. The waveboards covered by this standard are graded by performance criteria for different categories of body weight. This standard is applicable for roller sport equipment waveboard, intended for use by riders of more than 20 kg and up to 80 kg mass. Waveboards for use by users of less than 20 kg do not belong to the scope of this standard. They are toys for which is applicable EN 71-1. |                                   |            |

**National Ref :** ÖNORM S 2207-1  
**Title :** Fermentation plants - Part 1: Terms and definitions and basics  
**Scope :** The aim of ÖNORM S 2207 (all parts) is to define framework conditions for the planning, approval, construction and proper operation of biogas plants, taking into account the quality of gaseous, liquid and solid end products. This ÖNORM contains terms and fundamentals for biogas plants (fermentation plants) for the anaerobic recycling of waste according to AWG 2002, which are biodegradable, and biodegradable materials from agriculture, trade, industry and municipalities. It also takes into account the environmentally relevant emissions of the biogas plant and the immissions in the vicinity of the biogas plant. With regard to the choice of location, the specifications of the local spatial planning, the meteorological situation and other local conditions must be observed.

**Title :** Fermentation plants - Part 2: Technical requirements  
**Scope :** The aim of ÖNORM S 2207 (all parts) is to define framework conditions for the planning, approval, construction and proper operation of biogas plants, taking into account the quality of gaseous, liquid and solid end products. The present ÖNORM specifies technical requirements for biogas plants (fermentation plants) for the anaerobic recycling of waste according to AWG 2002, which are biodegradable, and other biodegradable materials from agriculture, trade, industry and municipalities. In doing so, consideration is also given to the environmentally relevant internal emissions and emissions of the biogas plant that are relevant to the environment. With regard to the choice of location, the specifications of the local spatial planning, the meteorological situation and other local conditions have to be observed.

| <b>Title :</b>        | Cranes and related accessories - Flat woven webbing sling made of polyester fibers, for limited lifting cycles, to be used for packaging, handling and transport in the steel industry                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Scope :</b>        | <p>This document specifies the safety requirements, including methods for evaluation and test, of flat woven webbing sling made of polyester fibres, designed and manufactured , for limited lifting cycles, to be used for packaging, handling and transport in the steel industry (here below named CMTS), in the range of widths from 25 mm up to and including 60 mm. CMTS made of polyester flat woven webbing sling, are suitable for use and storage in the range of temperature - 20°C ÷ 80 °C.</p> <p>This document offers technical requirements to minimize the risks, arising from the use of flat woven webbing sling, carried out according to the instructions and specifications supplied by the manufacturer.</p> <p>The above mentioned slings are intended to be used in particular conditions and must not to be confused with the flat woven webbing slings made of chemical fibres, for general purposes, as defined in UNI EN 1492-1, and intended for multiple purpose applications.</p> |

| <b>Title :</b>        | Criteria for qualification, control and use of additives for bitumen-bound mixtures to form layers of pavements for transport infrastructures |                            |             |

**Scope :** The scope of this technical specification is the definition of the qualification criteria, production control and use of additives for the packaging of bitumen-bound mixtures made by the relevant production plant or with in situ processing techniques, even if there are other hydraulic binders.

The additives or the modifying agents used in the production of mixtures materials are not included in the scope of this technical specification.
